

The Thumb Report

Tiny satellite + tiny cost + tiny timescale = HUGE RESULTS

October 2016

ThumbNet

By all accounts, the 67th International Astronautical Congress (IAC) in Guadalajara, Mexico, at the end of September, was a remarkable success!

Even though more reporters showed up to listen to SpaceX's announcement of humans traveling to Mars, ThumbSat received some fabulous exposure and tremendous support from the attendees of the IAC 2016 event.

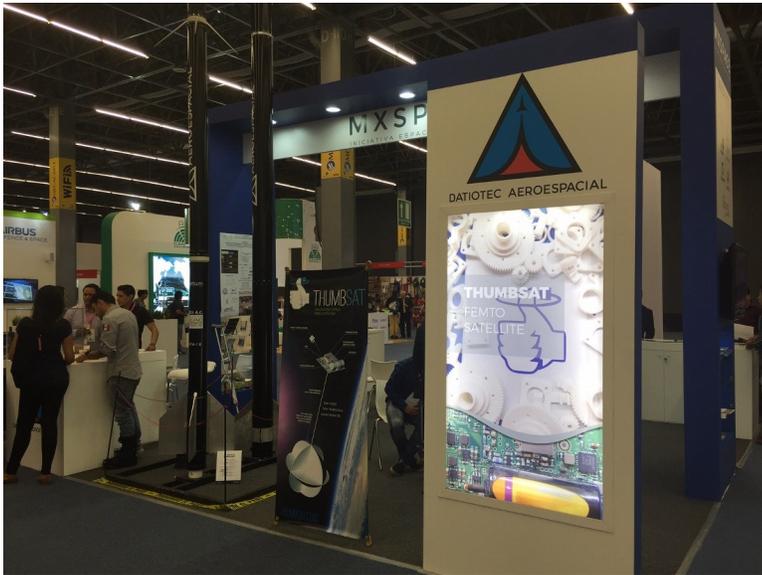

Two of ThumbSat's board members, José Humberto Torres and José Oldak, were on hand to meet with customers and answer questions across a wide variety of topics. "The atmosphere and support was outstanding," said Mr. Torres. "The hundreds of people who visited with ThumbSat in the few, short days of the convention made us feel very confident in the future of the company, and the excitement generated by showing off ThumbSat's tiny satellite was contagious."

The International Astronautical Congress is attended each year by the agency heads and senior executives of the

world's space agencies and leading corporations to discuss the future of space policy, exploration, and travel and is generally held in late September or early October.

ThumbSat would like to thank those that took the time to stop by and visit with us, and we look forward to next year at IAC in Adelaide, Australia!

The American Academy Nicosia

Unforeseen production delays of our upgraded ThumbNet N3 SDR receiver did not stop The American Academy Nicosia in Cyprus from getting a head start on their ThumbNet ground station! Having built their antenna, they will be ready to install the software and begin tracking immediately upon receipt of their N3!

Thank you for participating in [ThumbNet!](#)

No Cost to Participate in ThumbNet? What's the Catch?!

Similar to most people who become teachers and educators, we have a strong underlying belief that there is a global need to help the next generation of scientists, engineers, mathematicians, robotics specialists, astronauts, artists, and other technical fields and we would be very proud to help teach them. Additionally, we understand that school budgets around the world are always tight, and that educators frequently cannot add new programs to their curriculum, simply because there is no funding.

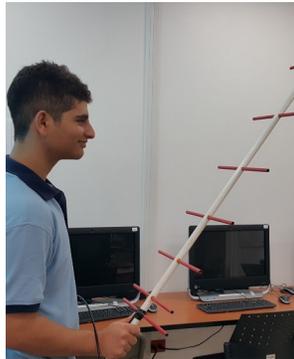

So...we provide the software and hardware for free! All we ask is that you actively participate and share with us and those in the ThumbNet community your experiences and lesson plans so that others too may learn and benefit!
